AMENDMENTS TO THE SPECIFICATION

For ease of reference and to further prosecution, Applicants submit a replacement specification with this paper. As required under 37 C.F.R. §§ 1.121 and 1.125, Applicants submit a marked up copy of the replacement specification with all additions in bold and underline text and all deletions in bold and strikethrough text. Because the Examiner noted some typographical errors in the previously submitted replacement paragraphs for the specification in the September 1, 2004 preliminary amendment, the marked-up version of the replacement specification shows all the previous amendments made to the specification in the September 1, 2004 paper as well as the amendments made to the specification herein. Applicants respectfully submit that the replacement specification adds no new matter to the Application and therefore, respectfully request that the amendments to the specification be entered.
